Client Machine

Two types of programs can connect to a Central Texas Backup Server from a client machine:

- **Syncrify client** - a custom client that requires Java plugin. If Java is not installed on the machine, it will be installed when you download the client binaries. This client is used to perform backups. This client can be installed on any operating system that supports Java, which includes:

    o Microsoft Windows (XP, Vista, Windows 7, and Windows Home Server)
    o Mac OS X and Mac OS X Server

- **A Web Browser** - using a web browser users can view backed up files and restore/download them to their local machines. Following is a list of supported browsers.
    o Microsoft Internet Explorer
    o Mozilla Firefox
    o Apple Safari
    o Google Chrome

Syncrify client is recommended!
